/note="Organ: Brain, Vector: pXX- Asc; Site_l: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTGAAT. This library was created for the University
lows Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
program coordinator."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1045

/note="Organ: Brain; Vector: pYX- Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is ACGAGACAG. This library was created for the University
lowa Brain Anatomy Project (BMAP): "Gene Discovery in the
Developing Mouse Nervous System", supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

Sequence 12 Application US/09841683

Patent No. US20020081600A1

GENERAL INFORMATION:

APPLICANT: Hu, Yi

APPLICANT: Wepomnichy, Boris

APPLICANT: Wang, Xiaoming

APPLICANT: Scoville, John

APPLICANT: Walke, D. Wade

TILLE OF INVENTION: No. US20020081600Alel Human Kinase Proteins and Polynucleotides

TILLE OF INVENTION NUMBER: US/09/841,683

CURRENT APPLICATION NUMBER: US 60/199,499

PRIOR PILING DATE: 2000-04-25

PRIOR APPLICATION NUMBER: US 60/201,227

PRIOR PLING DATE: 2000-05-01

NUMBER OF SEQ ID NOS: 12

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                 Sequence 1,

Sequence 1, Application US/09801876B

Patent No. 6492155

GENERAL INFORMATION:

APPLICANT: WE Jane et al

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES

TITLE OF INVENTION: THEREOF

TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES

TITLE OF INVENTION: 2001-09

CURRENT APPLICATION NUMBER: US/09/801,876B

CURRENT PILING DATE: 2001-03-09

NUMBER OF SEQ ID NOS: 8

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

Sequence 6, Application US/09841683

Patent No. 6617147

GENERAL INFORMATION:

APPLICANT: Hu, Yi

APPLICANT: Wang, Xiaoming

APPLICANT: Donoblo, Gregory

APPLICANT: Walke, D. Wade

TITLE OF INVENTION: No. 6617147e1 Human Kinase Proteins and Polynucleotides Encodin

APPLICANT: Walke, D. Wade

TITLE OF INVENTION: No. 6617147e1 Human Kinase Proteins and Polynucleotides Encodin

SPLICE REPRENEE: LEX-0167-USA

CURRENT APPLICATION NUMBER: US 60/199,499

PRIOR PRING DATE: 2000-04-25

PRIOR PRING DATE: 2000-05-01

NUMBER OF SEQ ID NOS: 12

SOFTWARE: FastSEQ for Windows Version 4.0

Sequence 3, Application US/09801876B
Patent No. 6492155
Patent No. 6492155
GRENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: THEREOF
TITLE OP INVENTION: THEREOF
TITLE OP INVENTION: THEREOF
FILE REFERENCE: CLOO1160
CURRENT APPLICATION NUMBER: US/09/801,876B
CURRENT PILING DATE: 2001-03-09
NUMBER OP SEQ ID NOS: 8
SOFTWARE: FRRESEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1049 ccaadaacaagrecegggacaacagcaggaggaggecegeceggeggaargacraretre 1108
